

Do Not Start Until You Are Advised To Do So

1. Do not forget to pray before starting to attempt the paper. It helps. Remember! SOMEONE is always with you (so be relaxed), and HE is also watching you (so be honest). Have Faith and Trust Yourself.
2. Remember, time management is critical, so be professional.
3. **Electric media (Calculator, Mobile, PDA, Laptop etc) is strictly prohibited in the examination hall. Cheating is highly un-ethical and will cause the cancellation of paper.**
4. This is a close book, close notes exam.
5. **No Queries, Understanding the question is part of exam.**
6. There are **12 printed pages including this sheet. Check them before leaving.**
7. **If you feel space for a question is not enough, write in two columns.**
8. NO cutting/overwriting in the answer area, and answers should have a reasonable logic.

B E S T O F L U C K ! ! !

CLO - 1	CLO - 2				CLO - 3	Paper
Question 1 [20]	Question 2 [20]	Question 3 [20]	Question 4 [40]	Total [80]	Question 5 [60]	Total [160]

Question # 01 (CLO-1)

[4 parts, 5 each]

Answer the following questions precisely

Theory / concepts description based questions. Write in your own words.

4 part 15 minutes: from whatever we covered in classroom, spent max 4 minutes of each

e.g. What is the main difference between while and for loops in C++

Describe the use throw with an example

Question # 02 (CLO-2)

[5 parts, 4 each]

Correct (obvious errors) in the following codes segments and later execute (dry run) them.

5 part 15 minutes: from whatever we covered in classroom, spent approximately 3 minutes of each. The last part may take more time, manage it

For errors, don't think deeply. Just read carefully and make corrections by cutting/overwriting e.g. in the following code, you may take/ignore missing endl is an obvious error, both ok for me

<pre>For {int k=100; k>=10; k-=20} cout << 100 -k cout << k -100</pre>	<pre>For (int k=100; k>=10; k-=20) cout << 100 -k cout << k -100 ; }</pre>
---	---

Question # 03 (CLO-2)

[4 parts, 5 each]

Write necessary code to the following questions.

4 part 20 minutes: from whatever we covered in classroom, spent approximately 5 minutes of each.

Short coding questions from 2 d arrays, file reading / writing, structs and enums

Question # 04 (CLO-2)

[2 parts, 20 each]

Write code/functions for the following descriptions.

2 part 24 minutes: from whatever we covered in classroom, spent approximately 12 minutes of each.

Long coding questions from file reading / writing, 2 D arrays and after mid topics topics

Question # 05 (CLO-3)

[6 parts, 10 each]

Write code/functions for the following descriptions.

6 part 40 minutes: from whatever we covered in classroom, spent approximately 8 minutes of each.

Spent four/five minutes at the beginning of paper to read and conceptualize the questions and order of attempt.

Before answering a question, read again and answer only what is asked. Do not spend time on what is not asked

You must consider LABs questions, code examples, quizzes, assignments, etc to get well prepared. Especially:

Pak cities for file handling,

City and time wise temperature statistics example for two dimensional arrays

Polynomial and Matrix examples for structs and Lab 10

Lab 7 for string manipulation

An assignment or a quiz for terminator based arrays / c-Style strings

The assignment questions evaluated in several labs

Question # 02 (CLO-2) [5 parts, 4 each]

Correct (obvious errors) in the following codes segments and later execute (dry run) them

A.

	Rough Work/Memory	Exact Output

B. On output screen every value

	Rough Work/Memory	Exact Output
<pre> } cout << "\b"; </pre>		

C.

	Rough Work/Memory	Exact Output

D.

	//main logic	Rough Work/Memory
	<pre> cout << foo(&x[2],3); </pre>	Exact Output

E.

	Rough Work/Memory	File in text editor
<pre> f.seekg(5L); getline f.seekp(n2); f << ios::end); f.close(); </pre>	<pre> do working here and at the end, clearly write in the next and below boxes </pre>	<pre> if file is opened in a text editor how it displayed </pre>
	File Stream <pre> if file is opened in a CPP program, what is the sequence of characters in the stream </pre>
